

YAMZ: better, faster, cheaper vocabulary standardization

John Kunze
California Digital Library

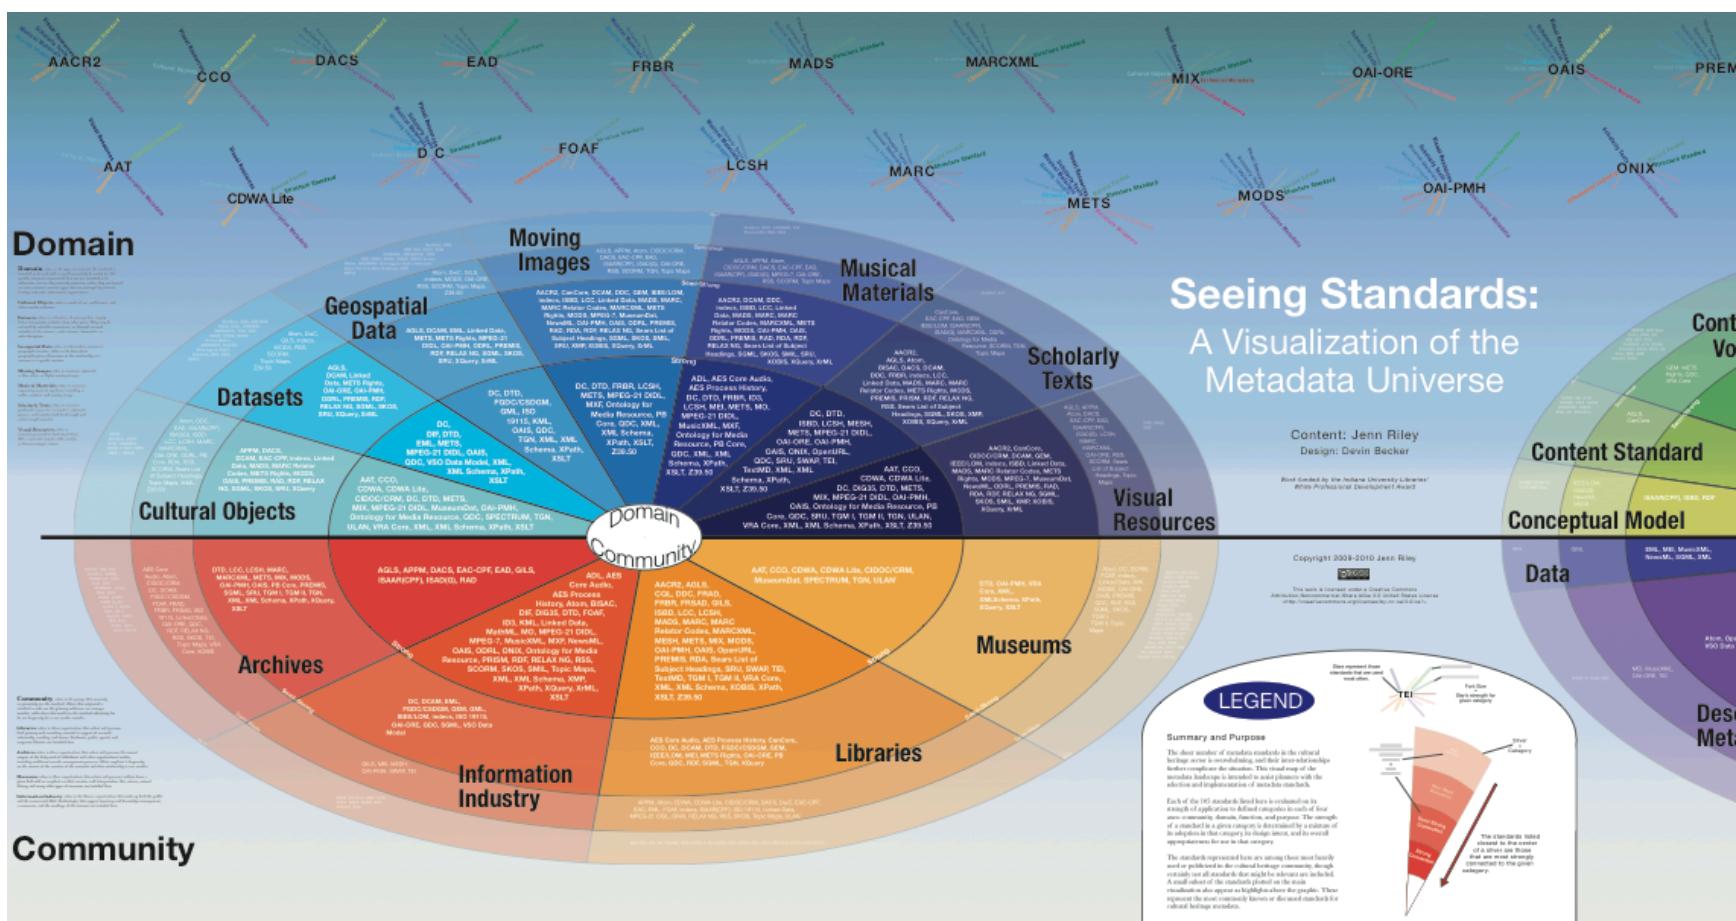

Problem: traditional standardization

European Parliament Technology - DG ITEC @ flickr

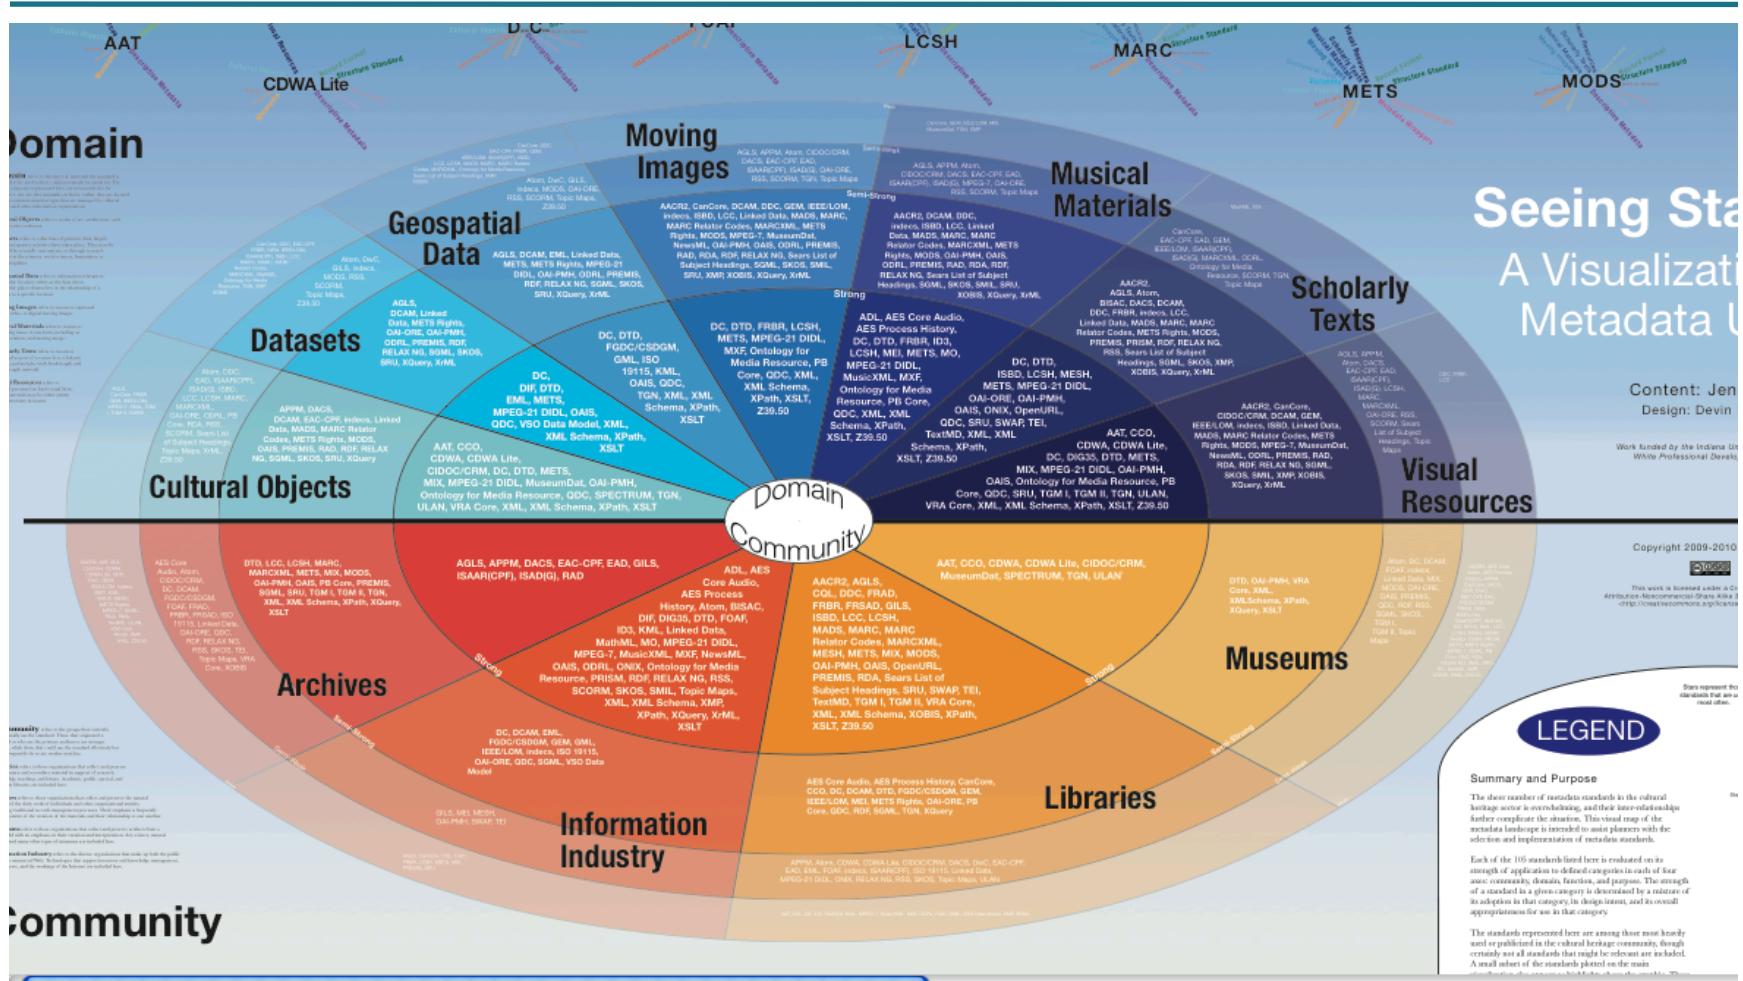

- Change by committee is ugly, costly, and slow
- Example: Dublin Core, 15 cross-domain terms

LEGEND

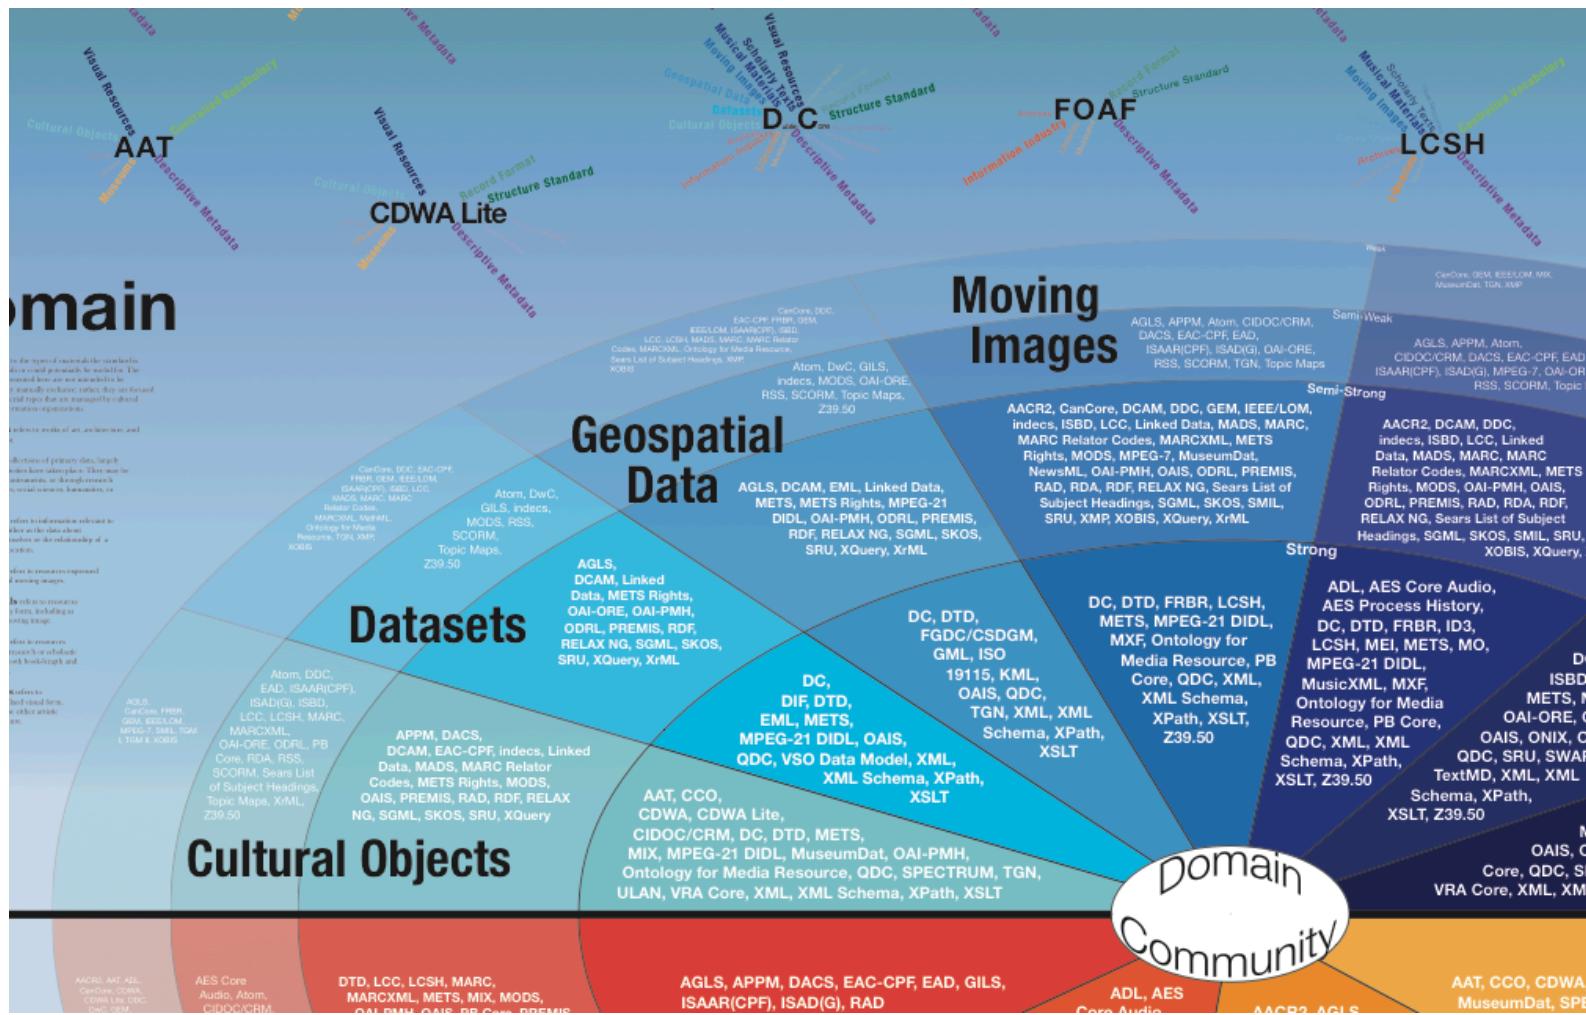

Summary and Purpose

The sheer number of metadata standards in the cultural heritage space is overwhelming, and their interrelationships are complex. This visualization is designed to help the metadata landscape be more pliable to assist planning with the selection and implementation of metadata standards.

Each of the 105 standard listed here is evaluated on its strength of application to defined categories in each of four axes: community, domain, function, and purpose. The strength of application is a qualitative weight is determined by a matrix of adoption to the categories in question, and its overall appropriateness for use in that category.

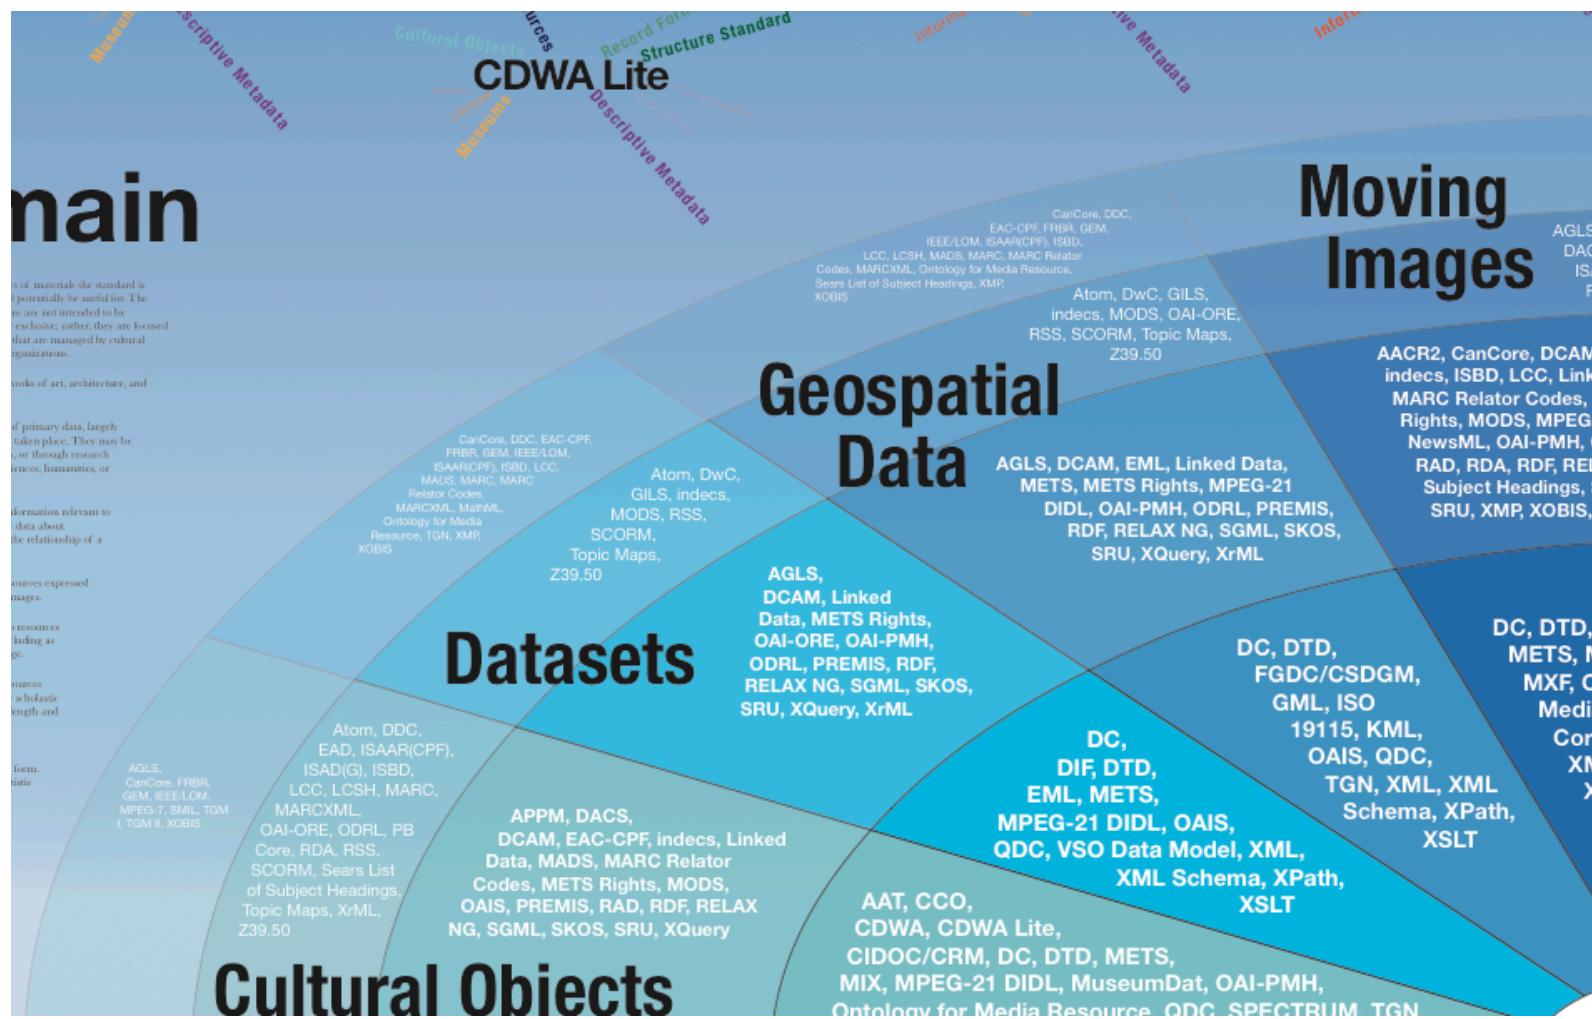

The standards represented here are among those most heavily used or prioritized in the cultural heritage community, though certainly not all standards that might be relevant are included. A small subset of the standards plotted on the main

Search for a term

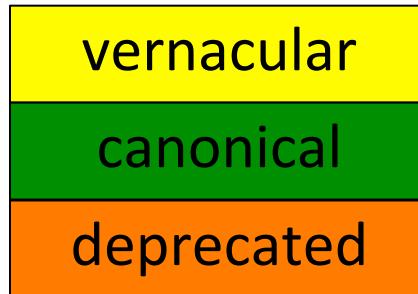

Metadictionary

A crowdsourced metadata dictionary. Search for terms, upvote useful ones.

Contributions to the YAMZ metadictionary are dedicated to the public domain under the terms of CC0. By using this site, you agree to Terms of Use and Privacy Policy statements similar to [wikimediafoundation.org](#).

Crowdsourcing, but with voting

Each term in
1 of 3 classes

- all terms are born here
- these don't evolve
- terms available always

Each term gets a globally unique persistent identifier

term: oba

definition: other (Tagalog)

id: <http://n2t.net/ark:/99152/h1193>

Reputation-based voting resists “gaming”

Karunakar Rayker @flickr

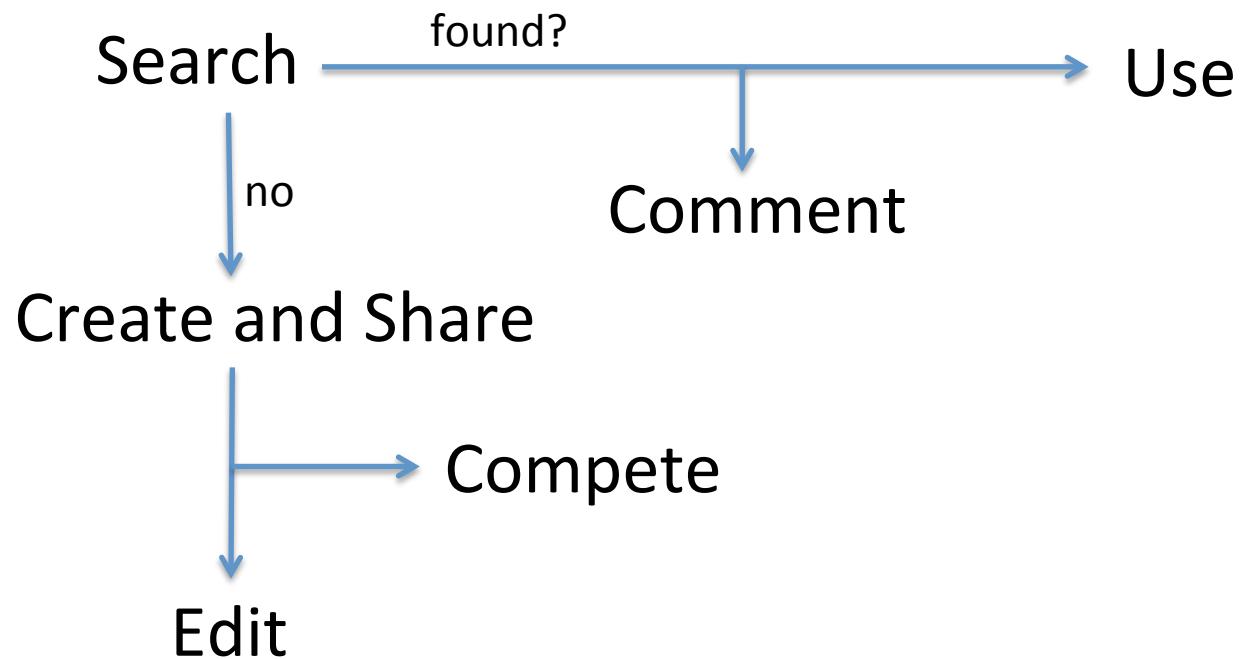

- Meritocracy: strong terms rise, weak terms decline
- Lessons from StackOverflow, Internet standards, and Wikipedia processes

Using dictionary terms

Add a dictionary term

Here you can propose a new term. You can help us maintain a high-quality metadictionary and minimize redundancies by [searching](#) for your term. Take a look at our community [guidelines](#) for best practice tips.

Term string:

Definition:

Term definition.

Example(s):

Examples of usage or related concepts.

Submit

Yamz use cases – macro level

1. develop a controlled vocabulary
 - borrow, invent, share, publish list of term references
2. create a pick list in software
 - same steps as in case 1, but refer to yamz online for user help (definitions and examples), then use the yamz API to add terms on behalf of users
3. add legacy vocabulary, and perhaps “correct” it
 - uploader only owns *their version* of terms

Finally

- Better, cheaper, faster metadata standardization
- Try it out at yamz.net
 - Code at <https://github.com/nassar/yamz>
 - Persistent identifiers (ARKs) from EZID
- Thanks to Jane Greenberg, Chris Patton, the NSF DataONE project, and the Digital Library Federation

THANK YOU!
